

WHAT'S IN YOUR BUILDING OPERATIONS STACK?

The number of CRE Tech Solutions out there can be overwhelming - and can make it tough to decide what software will be effective for your team and your business needs.

The first step is to understand the landscape. We're breaking down where existing software solutions fall in the New Building Management Stack and helping you navigate to solutions that will bring efficiency and growth to your portfolio.

ARE YOUR PROPERTIES CONNECTED & COVERED?

CRE TECH SOLUTIONS CAN BE BROKEN DOWN INTO FOUR CATEGORIES:

Traditional Property Management Software

"Smart" Building Software

Building Operations Software

Disconnected Point Solutions

Each category includes different technology solutions that focus on different aspects of running your business, **the best run buildings use solutions from each category, and understand how they work together to increase efficiency, reduce risk, and build a foundation for organizational growth.**

For example, while traditional property management software is great to have in place at your buildings, it focuses more on portfolio financials and G/L than day-to-day work. You'll want to make sure your team also uses solutions that were specifically created to handle things like automatic work scheduling and enforcing standard operating procedures.
